1 Introduce

This Article

This article is the user manual for the IP-XX series products. It also includes the application notes for how to use ATCOM products to build a telephony system for small office. Through this article, we hope that users can build the IP telephony system via IP-XX series products. *The IP-XX series PBXs include IP01, IP02, IP04, IP08 and IPBRI so far, since they have almost the same software and structure so we will use IP04 as the demo unit on this article. Same method is available to the IP-XX series products.*

IP01, IP02 , IP04, IP08 & IP-BRI

The IP-XX series PBXs are open source embedded IP PBX systems. They run uClinux and Asterisk and support rich IP PBX features. They have big advantages on its inherent open source software structure and ultra low power consumption (<5 watt in idle state, environment friendly).

			, · · · · ·		
Model No.	RJ45	TEL Ports	RS232 Port	Others	Size(mm)
IP-01	1	1 x fxo/fxs	1 fix RS232 port		100 x 100 x 28
IP02	2	2 x fxo/fxs	1 RS232 module		100 x 100 x 28
IP-04	1	4 x fxo/fxs	1 RS232 module	MMC	225 x 120 x 30
IP-08	2	8 x fxo/fxs	1 RS232 module	MMC,USB	225 x 120 x 30
IP-BRI	1	4 x BRI TE	1 fix RS232 port	ММС	225 x 120 x 30

Below are the difference between the IP01, IP04 and IP08 platform.

2 Configure the device via GUI

2.1 Access the GUI

The IP04 GUI is immigrated from Asterisk Now 2.0 version. The default IP for IP04 is 192.168.1.100. Put the default ip in your web browser and it will redirect to the setting page of IP04, the default password for the web access is:

Username: admin Password: mysecret

If you can't access the IP04, please check if you have connect the RJ45 cable to the WAN port and your computer is in the same network 192.168.1.xxx as the IP04.

Note: the recommend web browser of IP04 is Firefox.

2.2 System Status

When you have entered the IP04 setting page, the system status will be showed and you can see the system status as below:

ystem Status 🔌 👘				
		Sy	stem Status	
		Uptime : 15:38:26 v	up 22:44, load average: 0.00, 0.0	00, 0.00

2.4 Trunks

Trunks are used to make outbound call to the real world. There are different trunks we can set here.

Manage Analog trunks	ф (ф. 1997) 1997 - С. 1997 - С. 1 1997 - С. 1997 - С. 19	
Analog Trunks	Service Providers VOIP Trunks T1.E1.BRI Trunks	
Trunk	Analog Ports	
Ports 1	1	Edit 🗶 Delete
Ports 2	2	Edit 🗶 Delete
Ports 3	3	Edit 🗶 Delete
Ports 4	4	Edit 🗶 Delete

We have put the IP04 with four FXO ports so there are four analog trunks in this setting page. VoIP trunks (SIP&IAX2) are also available in the IPXX.

Analog Tru Creat	te New SIP/IAX trunk		2
♣ New SIP/I.	Туре:	SIP 🚽	
	Provider Name 🛈:	voipbuster	
r	Hostname :	sip.voipbuster.com	
	Username :	test	
	Password :	XXXXXXX	

More info about how to set up the trunks, please refer the application notes.

2.5 Outgoing Calling Rules

Outgoing Calling Rules defines the calling permission sand the routing rules when making calls.

+ New Calli	New CallingRule			X	
An outgo different set a fa	Calling Rule Pat Send to Local Destinatio Destinati	Name ① :		s 1 	different patterns to be dialed through a low-cost SIP trunk). You can optionally outgoing call rules. See the Dial Plans bound dialing.
	Send this call through trunk Use Trunk Strip and Prepend these digit:	x (1) p (1) digits f s (1) before	From front e dialing		Edit X Delete Edit X Delete Edit X Delete
	Use FailOver Trunk ① : fail over Trunk Strip and Prepend these digit;	x 1) p 1) digits f s 1) before] From front e dialing		Edit X Delete Edit X Delete Edit X Delete Edit X Delete
		⊘ Cancel 	Save		Edit 🗶 Delete
	port4_9	_9.	Ports 4	Ports 1	Edit 🗶 Delete
	port4_17909	_90.	Ports 4	None Selected	Edit 🔀 Delete

> <u>Calling Rule Name</u>: The name of your calling rule

> <u>Pattern</u>: Describe what numbers should use this rule:

- X ... Any Digit from 0-9
- Z ... Any Digit from 1-9
- N ... Any Digit from 2-9

[12345-9] ... Any Digit in the brackets (in this example,

1,2,3,4,5,6,7,8,9

. ... Wildcard, matches anything remaining; i.e. _9011. Matches

anything starting with 9011 (excluding 9011 itself)

 $! \dots$ Wildcard, causes the matching process to complete as soon as it

can unambiguously determine that no other matches are possible

For example, the extension _NXXXXX would match normal 7

digit numbers, while _1NXXNXXXX would represent a three

digit area code plus phone number, proceeded by a one.

- > <u>Use/Trunk</u>: Describe which trunk should be used in this rule
- Strip: Define how many digits should be removed from the dialstring.

Two samples for calling rule setting:

 Cut the first digit for all dialstring start with 9, and make outgoing call via port1: Calling Rule Name: Out_9 Pattern: _9. Use/Trunk: Ports 1 Strip: 1 digits from the front In this case, if you dial 983018806 in your extension, 83018806 will be sent via port1

2) Cut the first digit for all dialstring start with 0, and prepend 86 then dial via voipbuster trunk.

Calling Rule Name: Out_voipbuster Pattern: _0. Use/Trunk: Voipbuster Strip: 1 digits from the front And prepend these digits <u>86</u> In this case, if you dial 075583018806 in your extension, 8675583018806 will be sent via voipbuster trunk

2.6 Dial Plans

A Dial Plan is a collection of Outgoing Call Rules. Dial Plans are assigned to Users to specify the dialing permissions they have. For example, you might have one Dial Plan for local calling that only permits users of that Dial Plan to dial local numbers, via the "local" outgoing calling rule. Another user may be permitted to dial long distance numbers, and so would have a Dial Plan that includes both the "local" and "longdistance" outgoing calling rules.

2.7 Users

This page allow administrator to create extensions for every user.

🕈 Create 🛽 Create New User X General : -1 🛈 Name: DialPlan: DialPlani 🖵 🛈 Extension: 6000 (j) OutBound CallerID: CallerID: 6000 🔲 Enable Voicemail for this User 🛈 (j) 1 Mailbox: 6000 VoiceMail Access PIN code: Email Address: Technology ▼SIP ① ▼IAX ① Analog Station: None - ① flash ①: 750 rxflash ①: 1250 Codec Preference : First : u-law - Second : GSM - Third : None - Fourth : None - Fifth : None -VoIP Settings 🛈 Line Number : 1 🖵 🛈 \bigcirc SIP/IAX Password: MAC Address : NAT: 🗹 🛈 Can Reinvite: 🔲 🛈 DTMF Mode: RFC2833 🖵 🛈 insecure: no 🖵 🛈 Other Options 🔲 3-Way Calling 🛈 🔲 In Directory 🛈 🔲 Call Waiting 🛈 🔲 CII 🛈 🔲 Is Agent 🛈 Pickup Group: 1 🗸 Call Group: 1 🗸 🛇 Cancel 🗹 Update

General:

Extension: The number you can dial to reach this user.

Name: CallerID name of the user.

CallerID: The CID string when you dial to other internal users.

Outbound CallerID: Specify the public CallerID for outbound calls, it is only available when your digital or voip provider support this feature.

VoiceMail:

Voicemail Access PIN code: The password of your voicemail box Email address: The email address for the voicemail to email function.

Technology:

SIP: enable this option so the extension can be a SIP device.

IAX2: enable this option so the extension can be an IAX2 device.

Analog Station: If you have analog FXS ports in your IP04, you can select the port here for your extension.

flash/rxflash: flash parameter for the users.

Codec preference: specify the preference codec for the users.

Voip Setting:

MAC address: used for polycom phone provisioning.

Line Number: used for polycom phone provisioning.

Linekeys: used for polycom phone provisioning.

SIP/IAX2 password: user password for SIP/IAX2 registration.

NAT: enable this when you use the IP04 in public network and the sip devices are in

private network.

Can Reinvite: enable this and the IP04 will try to negotiate the endpoints to route the media string directly (not through IP04). This can reduce the CPU load of the IP04 and you will get better voice performance because the media string are sent directly from endpoint to endpoint.

DTMF mode: DTMF uses on conversation, the RFC2833 is the most common. Insecure: method of authentication,

Other Options:

3-Way Calling: enable/disable 3-way calling

In directory: check this if the user is listed in the directory.

Call waiting: enable/disable Call waiting

CTI: Computer Telephony Integration, allows access to 3rd party applications over Asterisk Manager Interface.

Is Agent: check this if the user is available in call queue.

Pick up Group: Specify the call pick up group.

Call Group: Specify the call group for the user.

2.8 Ring Groups

Define the Ringroups to dial more than one extension simultaneously, or to ring more than one phone sequentially.

🔲 🛈 Auto Fill 📃 🕕 Auto Pause 📃 🕕 Report Hold Time
KeyPress Events : None 🗸 🛈
Agents: ① You do not have any users defined as agents ! <u>click here</u> to manage users.
🚫 Cancel 🗹 Update

- Extension: This option defines the numbered extension that may be dialed to reach this Queue.
- Name: This option defines a name for this Queue, i.e. "Sales". 'Name' is a label to help you see this queue in the queue list.
- <u>Strategy</u>: This option sets the Ringing Strategy for this Queue. The options are RingAll: Ring All available Agents simultaneously until one answers. RoundRobin: Take turns ringing each available Agent. LeastRecent: Ring the Agent which was least recently called FewestCalls: Ring the Agent with the fewest completed calls. Random: Ring a Random Agent. RRmemory: RoundRobin with Memory, Remembers where it left off in the last ring pass.
 <u>Agents</u>: This selection shows all Users defined as Agents in their User conf. Checking a
- User here makes them a member of the current Queue.
- Music On Hold: Select the 'Music on Hold' Class for this Queue. 'Music on Hold' classes can be managed from the 'Music On Hold' panel.
- LeaveWhenEmpty: This option controls whether callers already on hold are forced out of a queue that has no agents. There are three options.

Yes: Callers are forced out of a queue when no agents are logged in.

No: Callers will remain in a queue with no agents.

Strict: Callers are forced out of a queue with no agents logged in, or if all logged in agents are unavailable.

Join Empty: This option controls whether callers can join a call queue that has no agents. There are three options,

Yes: Callers can join a call queue with no agents or only unavailable agents

No: Callers cannot join a queue with no agents

Strict: Callers cannot join a queue with no agents or if all agents are unavailable.

Queue Options:

- <u>Timeout</u>: How many seconds an Agent's phone will ring before the Queue tries to ring the next Agent.
- Wrapup Time: How many seconds after the completion of a call an Agent will have before the Queue can ring them with a new call. The default is 0, which is no delay.
- MaxLen: How many calls can be queued at once. This count does not include calls that have been connected with Agents, it only includes calls that have not yet been connected. Default is 0, which is no limit. When the limit has been reached, a caller will hear a busy tone and advance to the next calling rule after attempting to enter the queue.
- <u>AutoFill</u>: Defining this option causes the Queue, when multiple calls are in it at the same time, to push them to Agents simultaneously. Thus, instead of completing one call to an Agent at a time, the Queue will complete as many calls simultaneously to the available Agents.
- <u>AutoPause</u>: Enabling this option pauses an agent if they fail to answer a call. This means that the agent is still logged into the queue, but they will not receive calls from the queue. Once paused, an agent can unpause by logging into the queue using the regular agent login extension.
- <u>Report Hold Time</u>: Enabling this option causes Asterisk to report, to the Agent, the hold time of the caller before the caller is connected to the Agent.
- KeyPress Events: If a caller presses a key while waiting in the queue, this setting selects which voice menu should process the key press.

Onemony (b)	
Queues *	
Queues Agent Login Settings	
Agent	Login Settings
Agent Login Extension:	①
Agent Callback Login Extension:	\odot
Agent Logout:	To logout of Agent Login Hangup your phone. To Logout of Agent Callback Login Dial the same extension used to login, specify your extension and password when prompted, and hit # when asked for your callback extension. This will successfully log you out of all queues you
	are a part of. Save

- Agent Login Extension: Extension to be dialed for the Agents to Login to the Specific Queue. This is an extension that all the Agents can Call to Login to their specified Queues.
- Agent Callback Login Extension: Extension to be dialed for the Agents to Login to the Queues they are apart of. Same as Agent Login Extension, except you do not have to remain on the line.

2.11 Voice Menu (IVR)

Menus allow for more efficient routing of calls from incoming callers. Also known as IVR (Interactive Voice Response) menus or Digital Receptionist.

Lanage Voice			
🕂 Create Ne	Create New Vo	iceLenu X	
	Name:	Advanced Edit	
	Extension:	7000 ①	
	①	Allow Dialing Other Extensions

General Voicemail Settings:

- Extension for checking Message: This option, i.e. "2345" defines the extension that Users call in order to access their voicemail accounts.
- Direct VoiceMail Dial: Check this to enable direct voicemail dial. For instance, if John's extension is 6001, you would be able to directly dial into John's voicemailbox by dialing #6001 to leave him a message.
- Max Greeting:Set the maximum number of seconds for a User's voicemail greeting.
- <u>Dail 'O' for Operator</u>: Enable Callers to exit the voicemail application and connect to an operator extension. The operator extension must be defined from the 'Options' panel.
- Maximum messages per folder: This select box sets the maximum number of messages that a user may have in any of their folders.
- Maximum Message Time: This select box sets the maximum duration of a voicemail message in seconds. Message recording will not occur for times greater than this amount.
- Minimum message Time: This select box sets the minimum duration of a voicemail message in seconds. Messages below this threshold will be automatically deleted.
- Say Message Caller-ID: If this option is enabled, the Caller ID of the party that left the message will be played back before the voicemail message begins playing.
- Say Message Duration (in minutes): If this option is set, the duration of the message in minutes will be played back before the voicemail message begins playing.
- Allow callers to Review: Checking this option allows the caller to review their message before it is submitted as a new voicemail message.
- Play Envelope: Turn on/off playing introductions about each message when accessing them from the voicemail application.

Voicemail to Email: with this function configured, when there is a new voicemail for users, the ip04 will automatically send the voicemail to the user's email address set in the user's profile.

Voicemail to Email Preference:

preferences 🖤							
General Setting	Is Email Settings for VoiceMails SMTP Settings

	y cancer

- **Extension**: This is the number dialed to reach this Conference Bridge.
- Marked/Admin user Extension: If the conference bridge is to have marked users or admin users, then those users should enter the conference bridge using a separate extension. Admin conference users can lock and unlock the conference and can kick the most recent conference participant. Marked users are special users whose entrance and exit, if the Wait for Marked user or Close conference when last marked user exits can either begin or end the conference altogether.
- Pin Code: set an optional pin code, Ex: "1234" that must be entered in order to access the Conference Bridge.
- > <u>Administrator PIN Code</u>: Defining this option sets a PIN for Conference Administrators.
- Play Hold Music for First Caller: Checking this option causes Asterisk to play Hold Music to the first user in a conference, until another user has joined the same conference.
- Enable Caller Menu: Checking this option allows a user to access the Conference Bridge menu by pressing the * "Asterisk" key on their dialpad.
- Announce Callers: Checking this option announces, to all Bridge participants, the joining of any other participants.
- > <u>Quiet Mode</u>: Do not play enter/leave sounds
- Wait for Marked User: Prevent conference participants from hearing each other until the marked user has joined.

2.16 Follow Me

Follow Me	φ

- File Name: name of the new firmware, please make sure that you are using a md5 firmware for the updating.
- Reset Configs: enable this if you want to reset the networking and asterisk configs after upgrade.

2.26 Advance Options—File Editor

Here you can modify the asterisk configure files directly.

Note: Please make sure you know what the meaning in the files before trying to modify these files.

3 Application notes

3.1 Install hardware

The IPXX series IP PBXs use interchangeable FXO/FXS modules. The FXO and FXS signaling use different modules. Below are the available modules for the system.

Avaiable Modules					
Photo	Description	Suitable Products			
	one channel FXO module	IP01,IP02,IP04 and IP08			
	one channel FXS module	IP01,IP02,IP04 and IP08			
	dual channel FXO module	IP02 and IP08			
	dual channel FXS module	IP02 and IP08			

FXO: use to connect to the PSTN line FXS: use to connect to the analog phone.

Install illustration:

1) IP01 with one FX0

2) IP04 with two fxo two fxs modules.

3.2 Different methods to access the IPxx

There are several ways to access the IPXX series products. Different ways has different usage. The web/SSH/telnet accesses are base on network connection, and the console port access is via the console cable which allows you to access the devices on a lower level.

Web access

It is the most common way to access the IPxx. Most settings can be done through the web interface. Simply put the device's IP address in your web browser (better use Firefox) and enter the username and password to access the device. The web access username/password is **admin/mysecret**

SSH access

This is the advance way to access the device, you can use the putty software to access the device. in the ssh access, you can access the Linux directly and do more advance linux setting and debug. The SSH user/password is **root/uClinux**

Telnet access

The telnet access is similar with the SSH access but it is not suggested because it is not as convenient as SSH access.

Console access

The console access is used mainly for develope purpose or in the case when network is down.

Below are the connections pictures for console access For IP01 & IP02

For IP04

Below is the console port setting to access the IPXX

Running the Hyper Terminal or Minicom in your computer to connect the IP04, the setting of the console port should be:

Bits per second to 115200; Data bits : 8 Parity: None Stop bits: 1 Flow control: None

3.3 Make free internal calls

Making internal calls are the base requirement for a telephony system. Below are the settings for this usage. It is base on IP04 but setting is the same in other IPXX products. <u>System Setup</u>

At the beginning, we need to add some extensions to make internal calls. Each extension acts as an internal number. There are three types of extensions we can add: SIP, IAX2 and ZAP.

Before set up the extensions, we need to go to the **Options --> General Preferences** to set the user extensions range. The default user extensions range is from 6000~6299. The extension 6000 is used for auto-attendant so don't register on this extension.

General Preferences 🌵							
General Preferences	Language	Change Pas	sword	P	eboot	Advanced Options	
	Global Out	Bound CID 🕕					
	Global OutBour	d CID Name	•				
	Operator 1	Extension 🛈	: 🖵]

	RingGroup E	xtensions :	6400	to	6499		
	Queue E	xtensions :	6500	to	6599		
Vo	iceMail Group E	xtensions :	6600	to	6699		
	F	leset to defaul	lts				
1	🚫 Can	cel 🗹 Save	:				

Then go to page Dial Plan-->Create New Dialplan to create a default Dial Plan.

www.atcom.cn

Then go to page Users-->Create New User to create the extensions: 6001

Use the same method to add the extensions: 6002, 6003 and 6004. In our system picture, we use softphone x-lite to register on 6001 and 6002. Use AT-530 IP phone to register on the extensions 6003 and 6004. Then these four extensions can communicate with each other use the numbers 6001, 6002, 6003 and 6004.

3.4 Make outbound calls to PSTN

There are many kinds of trunking you can use to make outgoing calls. It includes: Analog FXO trunk, Digital E1/T1/BRI Trunk, SIP trunk, IAX trunk etc.

3.4.1 Analog/FXO trunking

For the IP01/04/08, you can install FXO module and use the FXO trunking to make outgoing call via your local PSTN line. The set up is as per below:

Step 1: Create FXO trunk

Go to page Trunks--> Add New Analog Trunk

New Analo		Channels:	🗹 1 🔽 2			
	Т	unk Name 🛈 :	PSTN			
		L. L	Advanced Opti	ons		
	Busy Detection 🛈 :	Yes 🕌		Busy	Count 🛈 :	3
	Busy Pattern 🛈 :	500, 500		Ring 1	imeout 🛈 :	8000
	Answer on Polarity Switch 🛈 :	No 🗸		Polarity	Hangup on Switch 🛈 :	No 🗸
	Call Progress 🛈 :	No 🗸		Progres	s Zone 🛈 :	VS 🗸
	Use CallerID 🛈 :	Yes 🕌		Caller II	Start 🛈 :	Ring 🗸
	CallerID 🛈 :	As Received 👻		Puls	e Dial 🛈 :	No 🗸
	CID Signalling 🛈 :	Bell - USA			mailbox :	•
	Flash Timing 🛈 :	750		Receive Flash	Timing 🛈 :	1250

Note: The port1 and port2 of IP04 are slotted with FXO modules. Always click "Apply Changes" in the right top corner when you do some changes.

Step 2: Create Outgoing Calling Rules

Go to page Outgoing Calling Rules.

nage Callin	g Rules 🧅	
+ New Calli:	New CallingRule X	
An outgo different a failoves	Calling Rule Name ① : OUT_PSTN Pattern ① : _9. Send to Local Destination ① Destination : Send this call through trunk: Use Trunk ① PSTN . Strip ① 1 digits from front and Prepend these digits ① before dialing	/s dif low-c ;oing md di
	Use Failover Trunk ① : fail over Trunk ① • Strip ① digits from front and Prepend these digits ① before dialing	

The pattern _9. and strip 1 digits means all calls start with 9 will be cut the first digit and sent out via this rule. for example, if you dial 983018049, the ip04 will send 83018049 to port1 or port2.

Step 3: Add New DialPlan

Go to page Dial Plans--> Crear New Dial Plans

alPlans			
- New Dialf	Create New DialPlan		X
A Dial P	DialPlan Name:	DialPlani	
you migh rule. Ano	Include Outgoing Calling Rules:	☑ out_psin	
	Include Local Contexts:	♥ default ♥ parkedcalls ♥ conferences ♥ ringgroups ♥ voicemenus ♥ queues ♥ voicemailgroups ♥ directory ♥ pagegroups ♥ page_an_extension	7
		Sancel Save	

Set the DialPlan1 to default dial plan so every new extension will use this dialplan in default. Then you can use your extensions to dial out via the port1 and port2.

3.4.2 VoIP trunking

Via the voip trunking we can dial call via the voip service to reduce our cost when making international calls.

Step 1: Add Voip trunks

Go to page Trunks--> Voip Trunks--> Add New Sip trunks

<pre>hew SIF/I Iype: SIF Provider Name ①: voipbuster Hostname : sip.voipbuster.com Username : aniceman Password : ******* Concel V Add</pre>	Analog Tru Create New SIP/IAX trunk	X
Provider Name U: VolpDuster Hostname : sip.volpDuster.com Username : aniceman Password : ******* © Cancel V Add	+ New SIP/I	
Hostname : sip.voipbuster.com Username : aniceman Password : ******* O Cancel V Add	Provider Name U: volpbuster	
Username : aniceman Password : ****** Cancel	Hostname : sip.voipbuster.com	
Password : ******** Cancel Md	Username : aniceman	
Cancel Mdd	Password : ******	
	Cancel Add	

We use the Voipbuster as our voip service provider here.

Step 2: Add voip calling rule

Go to page Outgoing Calling Rules.

www.atcom.cn

• New Call1:	New CallingRule	X
An outgo ifferent failove	Calling Rule Name ① : Out_VoIP Pattern ① : _00. Send to Local Destination ① Destination : Send this call through trunk: Use Trunk ① voipbuster . Strip ① 2 digits from front and Prepend these digits ① before dialing	rs d lo ;oir and ;
	Use FailOver Trunk ①: fail over Trunk ①	

All calls start with 00 will be sent out via our voip service provider.

Step 3: Add this new calling rule to the dial plan1

All extensions which use dialplan1 are able to use the voipbuster service now

3.5 Combine the IP04 with exist traditional PBX

Introduce:

Assume that we already have a (3-8 3fxo 8extensions) traditional PABX in our office and we want to add more pstn lines/extensions or use voip solution in the exist solution. We can combine the IP04 with the exist PABX solution use below structure.

1/ Connect the FXO port of the PABX to IP04's FXS port. so the PABX will be one of the IP04's FXS extensions and all the extensions under pabx can use all the fxs functions from IP04, the functions include:

make calls to the ip04's other extensions make calls use the ip04 voip trunk make PSTN via ip04's PSTN trunk

2/ Connect the FXS port for the PABX to IP04's FXO port. So the IP04 will be one of the PABX extensions and all the extensions under pabx can use all the fxs functions from pabx, the functions include:

make calls to the pabx's other extensions make PSTN via pabx's PSTN trunk

3.6 Intercommunication between two IPXX

Introduce:

This application note shows how to link two IP04 in different location. With this function, we can link branches together with IP04. Same method can be used when connect more than 2 IP04 in different branches.

3.6.1 Link two IP04s in the same network

The simplest case to link two IPxx together is in the same network. We start from this and then try to expand to different network. We use IP04 here, same method for other IPXXs products.

 IAX trunk

 IP: 192.168.1.21

 IP: 192.168.1.21

 IP: 192.168.1.21

 IP: 192.168.1.31

 IP: 192.168.1.30

 Extensions: 6001

 AT-530 A

Below is the structure of how to link two IP04s in the same LAN:

The method of connecting two IP04s in different location is: 1) register the IP04A as an extension in IP04B(via IAX2 trunk) so the extensions in IP04A can make calls to IP04B's extensions via this "special" trunk. 2) use the reverse method in IP04B to register to IP04A.

In above structure:

- 1) AT-530A registers to IP04A as an extension 6001.
- 2) AT-530B registers to IP04B as an extension 5001.
- 3) All the extensions under IP04A are in the format 6XXX.
- 4) All the extensions under IP04B are in the format 5XXX
- 5) Extensions under IP04A can make calls to extension under IP04B use format 5XXX.
- 6) Extensions under IP04B can make calls to extension under IP04A use format 6XXX.
- 7) The two IP04 links each other via IAX2 trunk.

Step 1: Set up a extension 6005 in IP04A

Extension:	6005 ; Phone number of this extension
Name:	User_IP04B ;
Password:	6005 ;IAX2 Log on password
Caller ID:	6005 ; Caller ID

Step 2: Set up an IAX trunk in IP04B to link to IP04A via this User_IP04B extension. In the page Trunks--> Add Voip Trunk

SIP/L	Provider Name 🛈:	To_IP04A			
	Hostname :	192.168.1.21			
	Username :	6005			
	Password :	6005			
	Codecs :	First : u-law - Second Fourth : 6.726 - Fifth	i : a-law .	Third : GSM 🕌	
	CallerID 🕕 :				
	FromDomain :				
	FromUser :				
	insecure :	no 🗸			

Step 3: Set Calling Rule in IP04B, all calls start with 6 will be sent to IP04A. In the page: Outgoing Calling Rules--> Add New Calling Rule

	Calling Rule Name Ψ : Out_lF04A	
	Pattern (1) : _6.	
- 🔲 Send to	Local Destination ()	
	Destination :	
- Send this c	all through trunk:	
	Has Taunh D To ID044	
	Strip 10 digits from front	
and Pre	pend these digits () before dialing	
- 🖾 Use Fai	10ver Trunk 🛈 :	
	fail over Trunk ① To_TF04A -	
	Strip 1 digits from front	
and Pre	pend these digits W Defore dialing	

Step 4: Add this new calling rule "Out_IP04A" to the exist dial plan. In the page: DialPlan --> Edit DialPlan1

Plans 🦌		
New Dial?	Edit DialPlan	
4 D 3 D.3		
A Dial Pi	DialPlan Name:	DiaiPiani
you might		
ule. Anot	Include Outgoing Calling	
	Rules:	✓Out_IP04A
Defer	Include Local Contexts:	🗹 default 🖤 parkedcalls 🖤 conferences 🖤 ringgroups 🖤 voicemenus 🖤 queues 🖤 voicemailgroups 🖤
Derau		directory 🗹 pagegroups 🗹 page_an_extension
		Cancel V Save
l		

Active the change and apply the test:

www.atcom.cn

1/Register an IP phone AT-530B to IP04B with 5001 extension.

2/Register an IP phone AT-530A to IP04A with 6001 extension.

3/Use 5001 to dial 6001. And you can see 6001 is ringing and you can pick up the calls.

Above is the way to router IP04B's call to IP04A, the method to link IP04A to IP04B is the same as above.

3.6.2 Link two IP04s in different location

The generally environment for two ip04 in different location is: two IP04 are both behind router and using the private IP.

Since the IP04 doesn't have the public IP, we need to do port forwarding in the router and make IP04 is reachable to others.

Step 1: Set port forwarding in the router for IP04A

The IP04A is behind the router, to register to IP04A via the internet, you need to forward the IAX2 port in your router, so all the packets received on the router WAN port (202.8.16.98:4569) will be forwarded to the IP04A (192.168.1.21:4569). Below is the setting page in a linksys router:

Applications			_					
& Gaming	Setup	Security	1	Applicat & Gam	tions	Administration	Status	
	Port Range F	orwarding	1	Po	rt Triggering	UPn	P Forwarding	DMZ
UPnP Forwarding								UPnP Forwarding
	Application	Ext.Port	тср	UDP	Int.Port	IP Address	Enabled	UPnP Forwarding can be use
	FTP	21	۲	0	21	192.168.1.0		to set up public services on your network. When users f
	Telnet	23	۲	0	23	192.168.1.0		the Internet make certain requests on your network, th
	SMTP	25	۲	0	25	192.168.1.0		Router can forward those requests to computers equip
	DNS	53	0	۲	53	192.168.1.0		to handle the requests. If, for example, you set the port
	TFTP	69	0	۲	69	192.168.1.0		forwarded to IP Address
	finger	79	۲	0	79	192.168.1.0		requests from outside users be forwarded to 192.168.1.2
	нттр	80	۲	0	80	192.168.1.199	~	is recommended that the computer use static IP
	POP3	110	۲	0	110	192.168.1.0		address.
	NNTP	119	۲	0	119	192.168.1.0		You may use this function to establish a Web server or FT
	SNMP	161	0	۲	161	192.168.1.0		server via an IP Gateway. In this format, Windows XP car
	ssh	2020	۲	0	22	192.168.1. 235	~	used to configure this throug UPnP communication.Be sure
	http1	8080	۲	0	80	192.168.1.29	✓	that you enter a valid IP Address. (You may need to
	http2	8090	۲	0	80	192.168.1. 209		establish a static IP address with your ISP in order to
	IAX	4569	۲	0	4569	192.168.1. 21		For added security,
	IAX2	4569	0	۲	4569	192.168.1. 21		More

Step 2. Set up the service provider and calling rule in IP04B to make it register to IP04A. This method is almost the same as above, EXCEPT you need to use the 202.8.16.98 as the service provider instead of 192.168.1.21.

Step 3. Use the same method do port forwarding in routerB for IP04B. Your public address from network provider maybe a dynamic ip which will be changed periodically. To overcome the problem of dynamic ip, you may need to use the DDNS service , for more info please google the internet.

3.7 Voicemail to Email Configure example

The IP04 will send a notify Email to your mail box when you have set up the Voicemail to Email function.

2) Configure your SMTP server

SIITF	Settings	Voicemail	notification Emails	φ				
6			o 10 m	5 10 W		CMTD Coming		
			General Settings	Email Settings for	voicemails	Swire Settings	<u> </u>	
				SMTP S	ettings			
				Smtp server 🛈:	mail.atcom	.com.cn		
				Port 🛈:	25			
				O Ca	ncel 🗹 Save			

If your SSMTP server needs Authentication, you need to put your username and password in the file ssmtp.conf (via SSH access) as below:

[/etc/ssmtp/ssmtp.conf]	
root=edwin@atcom.com.cn	//mailbox account
mailhub=mail.atcom.com.cn	//smtp server
rewriteDomain=atcom.com.cn	
hostname=edwin@atcom.com.cn	
<u>AuthUser=edwin@atcom.com.cn</u>	//mailbox account
AuthPass=xxxxxxx	//mailbox password
AuthMethod=LOGIN	
FromLineOverride=YES	

3) Enable the voicemail for users and put the corresponding Email Address.

1	Edit User Extension - 6001	X
	— General : ———————————————————————————————————	
	Extension: 6001 🛈 Name: Alice 🛈 DialPlan: DialPlan 🗸 🛈	
	CallerID: 6001 OutBound CallerID:	
	Minable Voicemail for this User W	
	VoiceMail Access PIN code: 6001 U Mailbox: 6001 U Email Address: Alice@atcom.com.	

3.8 Call Features

3.8.1 Call Pick Up

The default feature code to pick up a call is *8. If there is an incoming call for a user in the call group 2, then the users in the pickup group 2 is able to pick up this call by dialing *8. The pickup group and call group can be defined in the user setting page.

3.8.2 Call Park

The default call park extension is 700. The call park features code can be found in the file: /etc/asterisk/features.conf

Park a call on eye-beam:

--Press XFER button , then it will shows Enter Number + press XFER

--Enter the default park extension 700 and press the XFER button again. The call will be parked to the extension range 701~720

--dial 701~720 to get the parked call in another extension.

3.9 Cron

Cron is the name of program that enables Linux users to execute commands or scripts (groups of commands) automatically at a specified time/date. It is normally used for sys admin commands, like makewhatis, which builds a search database for the man -k command, or for running a backup script, but can be used for anything.

You can start the cron service for IP04 by: /etc/init.d/cron enable /etc/init.d/cron start

The crontab file locats in /etc/config. More info for how to use cron in linux, please search in the internet.

3.10 Backup and restore file

- 1 In the page "back up" to create new back up
- 2 You can restore this back up file to your computer
- 3 to transfer this back up file to another IPxx

- 1/ Put the file in your tftp server
- 2/ Use putty to connect to the IP04 via SSH

Run below commands

- 3/ cd /persistent/var/lib/asterisk/gui_backups
- 4/ tftp-g-r YOUR_BACKUP_FILE YOUR_TFTTP_IP
- 5/ go to the backup page and select the file to restore.
- 6/ Reboot the device.

3.11 Call queue agent Login and Logout

There are two kinds of login and logout for the agent.

First, you need to enable the "is agent" in users page for the extensions.

1/ Agent Log in: use your extension to dial Agent Log in extension and enter the username and password to log in. you need to keep the line on for log in. if you hang up the extension. It will log out.

1/ Agent Call Back Log in: use your extension to dial Agent Call Back extension and enter the username and password and new agent extension to log in. you don't need to keep the line on. When there is a call in the call queue, it will ring your extension. To log out, use your extension to dial Agent Call Back extension and enter the username and password and #.

3.12 DISA

DISA - this application allows you to make calls from outside the PBX as if you are inside it.

Purpose and usage

With this application you can allow calls from outside your PBX to be interpreted as if they are inside the PBX.

The principle is the following: somebody from outside the PBX system place a call to one of our numbers. The caller will hear a continuous signal. He/she has to enter a password followed by the pound key. If the password is correct then the caller will hear again a signal which this time is coming from inside the PBX system.

Below is the process to use DISA in IPOX,

1/: in the voicemenu --> create a new voicemenu,. add two steps:

step1: Answer

step2: DISA: Password:xxxxx, DIALPLAN.

2/ in the incoming rule, point your analog trunk to the DISA voice menu.

Test process:

1) make incoming call to your analog port.

2) you will hear the dial tone and then press the password followed by #

3) you will hear dialtone again, then press the number followed by # to dial the number you wish to dial.

4 FAQ

4.1 What is the user/password of my IP PBX?

The default IP and user/password of the IP PBX is:

	IP-0X(IP01/02/04/08)	IP-BRIM
Default IP	192.168.1.100	192.168.1.100
Web login	admin/mysecret	admin/astfin
SSH/RS232 login	root/uClinux	root/uClinux
	or	
	root/12xerXes06	

4.2 Why there are two kind of firmware available for download?

There are two kinds of firmware:

Ext2 file: the file is requested when upgrade from BAPS base firmware to Astfin2 base firmware. If your IPxx use the BAPS base firmware (old release model) and want to upgrade the Astfin2 base firmware, you use the ext2 file and upgrade via the RS232 port.

md5 file: if you already use the Astfin2 firmware, you can upgrade the firmware via the GUI. More info about how to upgrade please refer the user manual.

How to check if the device is BAPS base or ASTFIN2 base?

the BAPS base firmware support ipkg command in the OS and Astfin2 firmware doesn't support. You can use SSH to access to the firmware and run "ipkg update" to check if the ipkg is supported.

The default firmware shipped by ATCOM is Astfin2 structure firmware.

4.3 How to upgrade via IP – PBX via RS232 console port?

For this procedure you'll need the following:

- A modem cable (direct RS232)
- A serial port on your PC
- A serial console client (eg. PuTTY for Windows or minicom for Linux)
- A TFTP server (eg. Tftpd32 for Windows)
- Internet access for the IP0x
- A basic understanding of hexadecimals
- A static free working environment or at least make sure you discharge all static electricity from your body often during this process, before touching any components

- 1. Download the firmware and place it in your TFTP server's repository
- 2. Remove the top cover from the IPOx and install the small RS232 daughter board that was included in the package on J8 as shown below (if there's a jumper here remove it temporarily, and be sure to place it back once done or the unit might not boot).

- Configure your client application to use 115,200 baud, 8 data bits and no parity. Also make sure Hardware Flow Control is turned off, and that you're using the correct port (minicom might be set to use /dev/tty0 by default instead of /dev/ttyS0)
- 4. Connect the cable between the RS232 daughter board and your PC
- 5. Power on the IP0x
- 6. Press Enter when you get the prompt 'Hit any key to stop autoboot'
- 7. Enter the following commands ("ip04>" and "root:~>" signify the prompt and are not part of the command itself, and you may replace the IP addresses with ones suitable for your network. Do not copy/paste the commands.):

ip04>setenv autostart ip04>setenv ipaddr 192.168.1.100 ip04>setenv netmask 255.255.255.0 ip04>setenv gatewayip 192.168.1.1 ip04>setenv serverip 192.168.1.200

(Notes: "serverip" refers to your TFTP server. The addresses that you specify here are only used during the flashing process - when booting the new firmware it will attempt to use the IP address 192.168.1.100 and if that fails it will attempt DHCP instead. You may review your settings using the 'print' command.)

ip04>save ip04>tftp 0x1000000 uImage.ext2

ip04>nand erase clean ip04>nand erase

(Notes: During TFTP transfer, successful transferring will show alot of #'s, while timed out requests will display T's instead. Don't worry if it finds some bad blocks during the erasing.)

8.

ip04>nand write 0x1000000 0x0 0x700000

ip04>setenv bootargs ethaddr=\$(ethaddr) console=ttyBF0,115200 root=/dev/mtdblock0 rw ip04>setenv autostart yes ip04>setenv nandboot 'nboot 0x2000000 0x0' ip04>setenv bootcmd run nandboot ip04>save ip04>reset

9. The unit will now reboot using the newly flashed firmware, and should start downloading necessary files and completing the installation. Once it has completed and you're presented with a penguin and the "root:~>" prompt, enter the following command for a final reboot:

root:~> reboot

10. When done booting and back to the "root:~>" prompt, you may enter the following command to check the unit's current IP address:

root:~> ifconfig

11. Use that IP address to configure the unit through your web browser. Alternatively you may change the IP address temporarily (this change is lost when you power the unit off or reboot it, so set it permanently in the web GUI):

root:~> ifconfig eth0 <ip address>

(Replace <ip address> with the ip address of your choice.)

4.4 How to change my IP address?

Go to Options--> Advance Options-->Show Advance Options. Then you can find the network settings in the main menu.

working setting V
eth0 Interface
DHCP: auto 🖵
Hostname: 1p04
Domain:
IP address: 192.168.1.128
Subnet mask: 255.255.0
Gateway: 192.168.1.1
DNS: 192.168.1.1
NTP: pool.ntp.org
VLAN Interface for Eth0
VLAN:
Vlan number: 100
Vlan IP address: 192.168.100.100
Vlan Subnet mask: 255.255.0
Vlan Gateway: 192.168.100.1

There are three types for network settings:

DHCP: Yes IP04 will optain the dynamic IP from your router.

DHCP: auto IP04 will use the static IP specified below and pin the default gateway, when there is no reponse from the default gateway. the IP04 will switch to dynamic optain the IP from your router.

DHCP: No IP04 will use the static IP specified below.

The ip setting will affect only after reboot.

4.5 What is the OS and asterisk version used in IP-PBX?

The IP-PBX is built base on uClinux. The pre-load asterisk version is 1.4.21. you can also build your own firmware with your own asterisk version or add new software.

4.6 How to customs my firmware for IP-PBX?

Please consult <u>http://www.openippbx.org/index.php?title=Main_Page</u> for how to get source and make your own firmware for your IP-PBX.
